VULSINI

# ABOUT US

Welcome to Vulsini, a young, modern and dynamic company based in London, England with International trading links stretching across the globe.

Together with the important research and development efforts of our staff, designers and partner factories, the Vulsini hot stone heating bag was born. We are now continuing to develop exciting new products, not only for hot stone massage but also for new warm bamboo massage.

We hope that you enjoy using Vulsini and we aim is to continue bringing you new and innovative products in the future.

*The Vulsini Team*

**SHOULDER STRAP**  
included with the bag is a shoulder strap for convenient transportation

**WASH-BAGS**  
the wash-bags are used to collect and contain oily stones during a treatment to protect the main bag from oil contamination

**HEATING ELEMENT**  
when connected to a power supply, the Vulsini bag heats the stones using a built-in heating module

**DUAL-POWER**  
the bag can be powered by both an AC power supply using a controller to regulate the temperature or by an in-car lighter adaptor

# STEP-BY-STEP

Lay clean and dry stones into the bag compartments; medium to sacrum size stones in the large compartment and small, face and toe stones in the small compartment.

Plug the power cord into a standard grounded outlet, press the 'ON/OFF' button and set the temperature to 70°C to quickly preheat the bag.

Check the temperature reading on the digital thermometer display and once it reaches a comfortable working temperature, lower the temperature on the controller to match it.

If travelling to a client, place the travel pads on top of the stones for the duration of the journey.

Carefully check the temperature of the stones using a bare hand and perform your hot stone massage using a heatproof glove to remove the stones from the bag.

When finished with each used/oiled stone, discard into the wash-bags. At the end of the treatment, unplug the bag and put the travel pads on the base of the VULSINI bag placing the wash-bags on top.

# BENEFITS + FEATURES

The obvious advantage of the Vulsini Bag is that finally there is a way to make hot stone massage mobile. But have you also considered the following benefits?

- **Equipment:** As there is no water used to heat, there is no more need for traditionally used equipment such as a thermometer, scoop, net etc.
- **Increased productivity:** Not only does the Vulsini Bag take less time to set up and take down, but unlike a water stone heater the bag can be heated whilst in transit using the in-car lighter adaptor.
- **Dual-powered:** As well as being powered by an AC power supply, the bag also features a car lighter adaptor, allowing the stones to be pre-heated in transit.
- **Storage + Mobility:** The Vulsini I is around half the size of a small water heater and therefore much easier to transport! This also allows for easier and more convenient storage in spas, colleges, therapy rooms, beauty salons and even at home.
- **Maintenance:** Unlike existing water stone heaters, the Vulsini Bag does not require regular cleaning due to limescale build-up.
- **'Greener':** Compared to existing water stone heaters, the Vulsini Bag uses less power to heat, no water and is manufactured using a fraction of the metal used in water stone heaters.
